MAKING IT SIMPLE

## OTD-Forum Catwalk

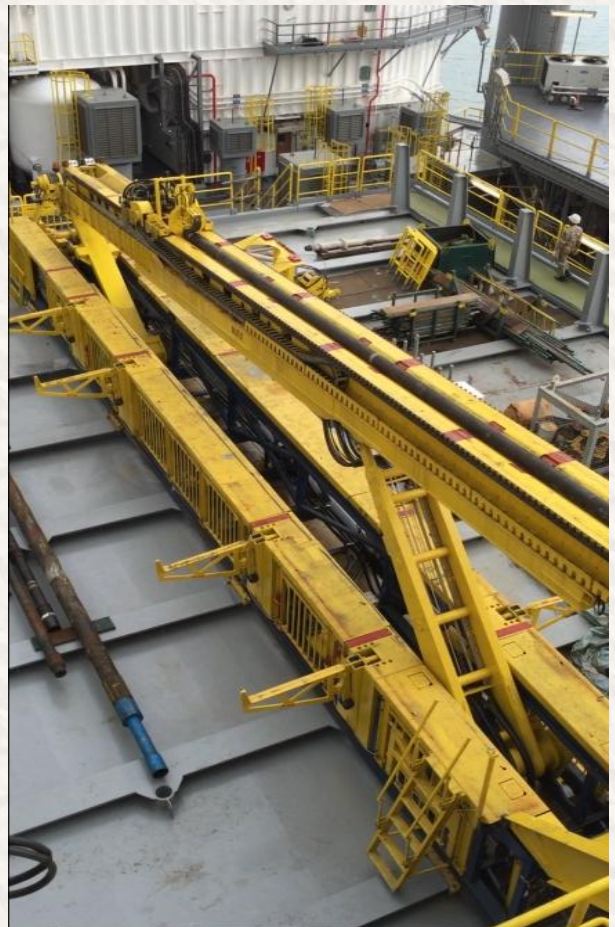

The OTD-Forum Hydraulic Catwalk is totally self-contained and designed for a drilling rig operating in an offshore & marine environment. The Catwalk mechanically conveys drilling and completion tubular from the pipe storage area to the Mousehole and well center pick-up positions on the drill floor.

The Catwalk is a free standing structure that sits on top of the pipe storage area traverse pipe deck beams and will hold and deliver tubular products (drill pipe, drill collars, casing and conductor) from the pipe deck to either the Mousehole positions or Well Center, and alternately will accept tubular products from the Well Center or Mousehole and transport the tubular back to the pipe deck level.

The Catwalk requires no physical connection with the drill floor module and moves transversely independent of the drilling module when repositioning port/starboard

## UNIQUE FEATURES

- Increased Safety for the drilling crew
- Manpower savings for Pipe-handling operations
- Easy Remote operation – directly from Drill-floor
- Easy Installation
- Existing designs and commercially installed
- In combination with OAC
- Enhanced with traversing capability
- Ease of integration? Proven!
